

Customize Instructional Content and Learning Paths with Ignitia

With Ignitia's customization capabilities, you have the freedom to build courses that suit your students and embrace your Christian school's vision. The order of units and lessons in any course can be adjusted to match your school's scope and sequence or address individual learner needs. This flexible tool allows you to insert units, lessons, projects, or quizzes from other Ignitia courses, add teacher-created custom lessons, delete or skip lessons, and set individual course levels for every student.

Flex Assessments automatically adjust quiz and test material to match the content included in your custom courses. Whether you alter an existing course or create your own, your assessments reflect the content in your lessons.

Instructional Support Tools

For each lesson in Ignitia, students have access to reference tools such as vocabulary, translation, and text-to-speech functions.

The Writer Tool helps students improve their writing with guided practice and targeted feedback throughout the writing process.

Direct Instruction Videos provide step-by-step guidance to assist students in the conceptual understanding of key skills, impart background knowledge, place concepts into real-world context, and allow students to learn at their own pace.

The Notes feature allows students to save thoughts or questions about key concepts and place them within specific portions of any Ignitia assignment, allowing for more clear and precise communication.

Virtual Labs introduce students to an interactive environment where they are in charge of solving problems and exploring a whole new world of science, technology, engineering, and math.
